

Sociology

Sociology Notes by Dr Rai Imran Khan

Syllabus Sociology 211

Introduction

1. What is sociology
2. Sociology & other social sciences
3. Sociology & Common sense/Stereotypes
4. Key terms – Social Problem/Sociological Issues .

Sociological Perspective

1. Structural Functionalism
2. Social Conflict theory
3. Symbolic Interactionism

Culture

1. What is culture?
2. Elements of Culture
3. Cultural Diversity

Socialization

1. Socialization & its importance
2. Agents of Socialization
3. Socialization through the life course
4. i) C.H. Cooley ii) George Herbert Mead

Social Interaction

1. Social Structure
2. i) Status ii) Status Set iii) Achieved & Ascribed iv) Master Status v) Role vi) Role Set vii) Role Conflict viii) Role Strain

Theories of Social Interaction (Brief)

1. Social Construction of Reality
2. Ethno methodology

Groups & Organizations

1. Types of Groups
2. Studies of Group Behaviour
3. Bureaucracy & its Characteristics
4. Deviance i) Deviance, Crime & Social Control ii) Types of Crime

Lecture No 1

Question No 1 What is sociology? What is scope and significance of sociology?

What does this means?

1. what is meaning of sociology
2. what is definition of sociology
3. What about sociology

Meanings of sociology

The word “sociology” is derived from the Latin word *socius* that translates in English as “companion” and the Greek word *logos* that translates in English as speech or reason), which together mean “reason or speech about companionship”.

Definitions of sociology

1. **Sociology** is, simply, the scientific study of social behavior and human groups.
2. **Sociology** is the systematic study of society and social interaction.
3. **Auguste Comte**, who is known as the father of modern Sociology, Sociology is the discipline that attempts to understand the forces outside us that shape our lives, interests, and personalities.
4. **Emile Durkheim**, sociology was the science of institutions of man
5. **Max Webber**, “sociology is the science which attempts to explain social action in order to arrive at the causal explanation of its results
6. **Giddings**, “Society is the union itself, the organization, the sum total of formal relations in which associating individuals are bound together”.
7. **MacIver**, “Society is the web of social relations”

(Question from past paper Define Sociology and second question was Define sociology with reference to different sociologists?)

Nature of sociology or Is sociology a science?

Science; the term science refers to the body of knowledge obtained by methods based on systematic observation.

Just like other scientific disciplines, sociology involves the organized, systematic study of phenomena (in this case, human behavior) in order to enhance understanding.

Two major kinds of Sciences

1. **Natural science** is the study of the physical features of nature and the ways in which they interact and change. Astronomy, biology, chemistry, geology, and physics are all natural sciences.
2. **Social science** is the study of the social features of humans and the ways in which they interact and change. The social sciences include sociology, anthropology, economics, history, psychology, and political science.

Lecture No 2

Sociology and other social sciences

(Question from past paper relation of sociology with social work)

Introduction;

There are two kinds of social sciences; Natural Sciences and Social sciences. Social sciences are the study of the social features of humans and the ways in which they interact and change. The social sciences include sociology, anthropology, economics, history, political science and psychology.

Brief definitions of social sciences

- A. Sociology;** **Sociology** is study of the influence that society has on people's attitudes and behavior and the ways in which people interact and shape society
- B. Anthropology;** anthropology usually study past cultures and preindustrial societies that continue today, as well as the origins of humans.
- C. Economics;** economics explore the ways in which people produce and exchange goods and services, along with money and other resources.
- D. History;** history is concerned with the peoples and events of the past and their significance for us today.
- E. Political science** is study of international relations, the workings of government, and the exercise of power and authority.
- F. Psychology** is subject that investigate personality and individual behavior.
- G. Social work;** *social work* deals with the physical aspect of dealing with human problems.

Relation of sociology with other social sciences

Sociology; Sociology is a science of society and it is also a science of social phenomena and social relationship. It is a science of collective behavior. It studies human behavior in groups.

.....; is also social science but science of.....

Relationship

1. Both are social science

As science are of two kinds natural sciences and social sciences whereas Sociology and Are both social sciences.

- 2. Helping the other subject;** Sociology helps..... In different fields of common topics to develop deep understanding of the common issues.

3. **Seeking help from other subject;**helps sociology in different fields of sociology to develop deep understanding of the common issues.

4. **Mutually related subjects**

As both of social science it mean that both are mutually related subjects and important to understand the existence of human being.

5. **Common areas of study**

In between the sociology and There are number of common areas of study that make the study of human behavior more important.

6. **Common Objectives**

Sociology and are all about human being and important for the welfare of human beings and make the life of people easy.

Difference

1. **Two different social sciences**

It is important to note that sociology andare two different social sciences designs to study different aspects of human activities.

2. **Difference in Scope**

One of the important difference between sociology andis that both are different in their scope of study.

3. **Limitations are different**

Another important difference between sociology andis that both have different in limitations of study.

4. **Objectives are different**

A key important difference between sociology andis that both are social sciences but at micro level both have different objectives.

5. **Uses are different**

One of the important difference between sociology andis that the uses of both are different in the practical form.

Conclusion

It is noteworthy that sociology is mother of all social sciences, so its relationship with other social sciences is of unique nature, it has some common areas and also different too. So it can be said that sociology is one of the important subject of social sciences.

Lecture No 3

Sociology and common sense

Question in 2018 was as Explain how sociology is a scientific discipline and is different from common sense knowledge?

Introduction

Many people mistakenly believe that sociology is the study of the commonsense or obvious. They claim that sociology is nothing but the application of common sense. This problem mainly arises sometimes sociological knowledge come so close to the everyday experience of the individual that it is taken as common sense or obvious.

To explain the difference between Sociological Knowledge and Commonsense Knowledge it is important to know what actually Sociological Knowledge and Commonsense knowledge

Feature Common sense knowledge or prospective

1. **Based on loose understandings;** Commonsense understanding is based on loose understanding of concepts, whereas sociology does so in a very strict manner. Some times for example loose interpretations of concepts like working class, rich people, women etc is done.
2. **No empirical testing;** Commonsense knowledge does not employ empirical (experimental) testing.
3. **Loose analysis;** Commonsense knowledge relates two variables in a loose manner without examining the influence of other variables.
4. **Non- logical explanations;** Observed phenomenon is explained in terms of non-logical type knowledge, For example poverty of a person is because of God's wishes.

Features of sociology/ sociological knowledge or prospective

1. **Based on strict understandings;** sociological understanding is based on strict understanding of concepts in a very strict manner. Always strict interpretations of concepts like working class, rich people, women etc are done.
2. **Empirical testing;** Sociological knowledge always employ empirical (experimental) testing.

3. **Scientific analysis;** sociological knowledge relates two variables in a very scientific ways with examining the influence of other variables.
4. **Logical explanations;** sociology explained the phenomenon rationally and systematically. For example poverty of a person is linked with social, political system and personal efforts.

No doubt there is sociology borrows from common sense but at the same time vast differences exists between them.

1. **Difference of scientific knowledge and nonscientific knowledge;** Sociological knowledge, is scientific knowledge come from systematic way and commonsense knowledge is nonscientific knowledge.
2. **Difference of everyday knowledge and research based knowledge;** sociological ideas and explanation claims to represent the things which are research based. Commonsense ideas and explanations claim to represent the things that "everyone knows" about the social world and / or human behavior.
3. **Difference of valid and invalid knowledge;** Sociological knowledge, has greater validity than most forms of commonsense knowledge.
4. **Difference of evidence and assumption;** sociology try to base their statements about human behavior on evidence rather than simple assumption.
5. **Difference of Argument and claims of fact;** sociologists are concerned with arguments and proofs and commonsense knowledge with simple assertions of "fact".
6. **Sociology is Product of theory development and common sense is product of assumption;** it is the fact that sociological knowledge is the product of theory development and testing, whereas common-sense knowledge is simply the product of assumption.
7. **Sociology is Progressive knowledge and common sense is knowledge of status quo;** the sociological knowledge is meant to be progressive in character and Common sense views tend to reflect social traditions and conventions and therefore tend to reinforce the status quo and resist social change.
8. **Sociology is research based knowledge and commonsense is general knowledge perception;** sociology is knowledge that is result of experiments and Common sense is sometimes nothing but a general perception based on individual experiences. For instance; people may perceive there to be a major crime problem based on their own experiences of crime. But, in reality if facts are analyzed, the rate of crime may have actually come down.
9. **Sociology is modern knowledge and commonsense is traditional knowledge perception;** Sociological views are modern and Common sense views are often based on images which get reinforced through the tradition. Whereas, Sociological views actively challenge stereotypes. For example, being a saint in Pakistani society, assume a particular type of image which people accept as true.

Relationship between Sociology and Commonsense

But at the same time, it should not be understood that all common sense beliefs are contradictory and irrelevant, many sociological findings do appear consistent with common sense. Some thinkers like **Anthony Giddens** also claim that sociological knowledge often becomes common sense

knowledge for example; sociological research into marital breakdown has lead people to believe that marriage is a risky business.

1. **Sociological terms have commonsense meanings;** Concepts used in sociology like Families, kinship networks, neighbourhoods, cities and villages, etc have a meaning which is definitely influenced by common sensical knowledge therefore Sociological terms are laden with meanings given by common-sensical knowledge.
2. **Commonsense is raw material for sociological experiments;** Common sense provides the raw material for sociological investigations. Sociological knowledge would be considered incomplete if it does not answers the commonsensical knowledge its theories, observations and conclusions.
3. **common sense helps sociological knowledge;** common sense also helps in development of sociological knowledge, Common sense knowledge can criticize sociological knowledge, suggest alternatives, which helps in enriching of the disciplines.
4. **Uncertainty is common;** there is no such thing as the truth and therefore all knowledge is uncertain. They claim that we are left with competing narratives which are in a power struggle between each other, sociologists of course stand up for sociology over common sense - but is sociology any more valid than common sense?
5. **Commonsense is base of sociology;** it is matter of fact that take start from commonsense as systematically testing common sense beliefs against facts, sociologists can sort out which popular beliefs hold true and which do not

Lecture No 4

Social Problems

Definition; All abnormal behaviors or deviations from accepted norms are termed as social problems such as crime, rape, drug addiction, and domestic violence, ethnic or communal tension.

Definition; A social problem is any condition or behavior that has negative consequences for large numbers of people and that is generally recognized as a condition or behavior that needs to be addressed.

This definition social problem has both an *objective* component and a *subjective* component.

The objective component in this definition are empirical (experimental) evidence of the negative consequences of a social condition or behavior, while the subjective component in this definition is a perception that the condition or behavior is indeed a problem that needs to be addressed.

Four Stages to recognize anything as social problem

The natural history of a social problem consists of four stages:

1. **Emergence and claims making;** A social problem emerges when a social entity (such as a social change group, the news media, or influential politicians) begins to call attention to a condition or behavior that it perceives to be undesirable and in need of remedy.
2. **Legitimacy;** Once a social group succeeds in turning a condition or behavior into a social problem, it usually tries to persuade the government (local, state, and/or federal) to take

some action and make a policy, to address the problem. As part of this effort, it tries to convince the government that its claims about the problem are legitimate, that they make sense and are supported by empirical (research-based) evidence.

3. **Renewed claims making;** Even if government action does occur, social change groups often conclude that the action is too limited in goals or scope to be able to successfully address the social problem. If they reach this conclusion, they often decide to press their demands anew. They do so by reasserting their claims and by criticizing the official response they have received from the government.
4. **Alternative strategies;** Despite the renewed claims making, social change groups often conclude that the government is not responding sufficiently to their claims. This realization leads them to develop their own strategies for addressing the social problem

Two compulsory elements in problem to become a Social Problem

- (1) **An objective condition,** like crime, poverty, communal tensions and so on, the presence and magnitude of which can be observed, verified and measured by impartial social observers.
- (2) **A subjective definition** by some members of the society that the objective condition is a 'problem' and must be acted upon. Here is where values come into play. People start perceiving that some values are being threatened.

Elements of a Social Problems:

Though the above cited definitions differ in ways these are explained, but the following important characteristics may be separated from them:

1. **A objectionable situation;** A situation resented as objectionable by a significant number of people.
2. **Reason to be undesirable;** It is considered as undesirable because of its injurious consequences.
3. **Social engineering as solution;** All social problems want correction through collective action. They want change in conditions via some means of social engineering.
4. **Definition of social problem;** All abnormal behaviors or deviations from accepted norms are termed as social problems such as crime, juvenile delinquency, prostitution, rape, drug addiction, domestic violence, ethnic or communal tension.
5. **Reasons of change in definition of social problem;** Social problems are not fixed but change with the change in time and space. Changes in law and mores change the concept of social problem

Types of Social Problems:

Sociologists distinguish between two types of social problems.

First, problems of social organization; problems of social organization which are created by the community or the society. Community or society produces situations that some members of the society refuse to accept as right or necessary.

These are, for instance, communalism, casteism, regionalism, poverty, gender discrimination, over population, environmental imbalance (different kinds of pollution, health hazards, etc.).

Second, problems of deviance; problems of deviance of people from the conventional ways of living. These include, for example, misbehavior, drug addiction, alcoholism, mental illness, various forms of sexual behavior, bigamy, prostitution, defacement and lot of other behaviours, most of which are forbidden by law.

Lecture No 5

The Sociological perspective (imagination)

Meaning of Sociological perspective (imagination); Sociological perspective (imagination) is view or idea or the basic insight of sociology that human behavior is shaped by the groups to which people belong and by the social interaction that takes place within those groups.

Definition; sociological perspective (imagination) is a view that our social backgrounds influence our attitudes, behavior, and life probabilities.

Importance of Sociological perspective (imagination);

This perspective explains that

1. **Influence of Social backgrounds;** sociological perspective (imagination) explains that Social backgrounds influence but do not totally determine attitudes and behavior.
2. **Society influence our thought;** sociological perspective (imagination) explains that we are who we are and we behave the way we do because we happen to live in a particular society at a particular point in space and time.
3. **People think social world is natural;** sociological perspective (imagination) explains that People tend to accept their social world unquestioningly, as something "natural."
4. **Changed your way of thinking;** sociological perspective (imagination) enables us to see society as a temporary social product, created by human beings and capable of being changed by them as well.
5. **Look thing from new angle;** the sociological perspective (imagination) invite us to look at our familiar surroundings in a fresh way.
6. **Nothing should be taken for granted;** It encourages us to take a new look at the world we have always taken for granted, to examine our social environment with the same curiosity that we might bring to an exotic foreign culture.
7. **There are missing aspects of society;** sociological perspective (imagination) explains that the study of sociology leads us into areas of society that we might otherwise have ignored or misunderstood.
8. **Sociology will help to accept new viewpoints;** sociological perspective (imagination) explains that since our world view is shaped by our personal experience and since people with different social experiences have different definitions of social reality, sociology helps us to appreciate viewpoints other than our own and to understand how these viewpoints came into being.

9. **Sociology also helps us understand ourselves better;** without the sociological perspective (imagination) (which has been called the "sociological imagination"), people see the world through their limited experience of a small orbit of family, friends, co-workers.
10. **Trace the connection b/w events and society;** The sociological imagination allows us to stand apart mentally from our limited experience and see the link between private concerns and social issues. It permits us to trace the connection between the patterns and events of our own and the patterns and events of our society.

Lecture No 6

A. Social relations

1. i) Structural Functionalism
2. ii) Social Conflict

B. Social Action

1. Symbolic Interactionism

1. INTRODUCTION

How society influence people and how people influence the society is very important topic of sociology. To study the relation of people with social institutions, there are three key theories or theoretical perspectives;

There are three primary theoretical perspectives:

1. The **symbolic interactionism** symbolic interactionist perspective
2. The **Structural Functionalism** or functionalist perspective
3. **The Conflict theory** or conflict perspective.

These perspectives offer sociologists theoretical models for explaining how society influences people, and vice versa. Each perspective individually conceptualizes society, social forces, and human behavior

2 . DEFINITIONS

Structural Functionalism;

Social functionalist perspective argues that individuals and groups (social classes) within society interact on the basis of consensus and cooperation.

Symbolic interactionism;

Symbolic interactionism theory assumes that people respond to social elements of their environments according to the subjective meanings they attach to those social elements.

Conflict theory;

Conflict perspective argues that individuals and groups (social classes) within society interact on the basis of competition and class struggle.

3.BASIC IDEOLOGY

Structural functionalism; functionalist perspective, says that each aspect of society is interdependent and contributes to society's functioning as a whole.

Conflict theory; conflict theorists challenge the status quo, encourage social change (even when this means social revolution), and believe rich and powerful people force social order on the

symbolic interactionism; The symbolic interactionist perspective, is viewpoint to examine society that urge us to analyses the symbols and details of everyday life, what these symbols mean, and how people interact with each other.

4. FOUNDERS

Structural Functionalism; Emile Durkheim, Robert Merton

Symbolic interactionism Max Weber and George H. Mead

Conflict theory; Karl Marx

5. Interaction of people

A. Structural factionalism

Structural Functionalism says People cooperate to effect social order; Functionalists believe that society is held together by social consensus, or cohesion, in which members of the society agree upon, and work together to achieve, what is best for society as a whole.

Symbolic interactionists give serious thought to how people act; symbolic interactionists give serious thought to how people act, and then seek to determine what meanings individuals assign to their own actions and symbols, as well as to those of others.

6. CHANGE IN SOCIETY

Structural Functionalism is Supporter of status quo; functionalists who defend the status quo, avoid social change, and believe people cooperate to effect social order.

Symbolic interactionism is also Supporter of status quo; as it defends the status quo, avoid social change, and believe people have developed a mechanism of interaction using social symbols after long journey of social order.

Conflict theorist are opposite of status quo and supporter of change as they believe that social interaction is result of competition.

7. NATURAL COMPENSATION

Structural Functionalism Believes in natural compensation as functionalism sees active social change as undesirable because the various parts of society will compensate naturally for any problems that may arise.

Symbolic interactionism also believes in natural compensation as they also sees active social change as undesirable because the various parts of society will compensate naturally for any problems that may arise.

Conflict theory don't Believes in natural compensation as functionalism sees active social change as undesirable because the various parts of society will compensate naturally for any problems that may arise.

8. **NEGATIVE AND POSITIVE FUNCTION OF SOCIETY;**

Structural Functionalism Believes in the positive, cooperative, and never-changing nature of society.

Symbolic interactionism focuses on the positive, cooperative, and never-changing nature of society.

Conflict theory or the conflict perspective focuses on the negative, conflicted, and ever-changing nature of society.

9. **SOCIAL COOPERATION**

Structural Functionalism says people cooperate for common good as; the government, or state, provides education for the children of the family, which in turn pays taxes on which the state depends to keep itself running

Symbolic interactionism says Interpretation of the symbols is base of social cooperation and people attach meanings to symbols, and then they act according to their subjective interpretation of these symbols

Conflict theory says there is no cooperation but permeant conflict in society on the Economic basis; conflict theorists find social conflict between any groups in which the potential for inequality exists: racial, gender, religious, political, economic, and so on.

10. **CRITICISM**

Structural Functionalism has to face the criticism because

1. It neglect the negative functions of society
2. Supportive of status quo
3. It discourage the social change

Symbolic interactionism has to face the criticism because

1. Missing macro level of social interpretation
2. Missing big issues of society;
3. Missing the influence of other social forces on society

Conflict theory has to face the criticism because

1. Overly negative view of society;
2. No interest in preserving social order;
3. Missing positive functions;

Lecture No 7

CULTURE

Culture is made up of all of the ideas, beliefs, behaviors, and products common to, a people's way of life. Culture encompasses everything humans create and have as they interact together.

Culture also refers to a set of rules and procedures along with a supporting set of ideas and values.

Culture refers to the distinctive way of life of a group of people. And acquisition of a particular way of life is what is known as culture. Thus culture is a learned behavior, it is a social heritage, it is super organic and it is a decision for living.

Definition; E.B. Tylor, "Culture is that complex whole which includes knowledge, belief, art, morals, law, custom and any other capabilities acquired by man as a member of society".

The Nature of Culture:

(1) Culture is acquired:

Culture is an acquired quality or behavior Human beings learn or acquire culture by living in group. He learns it from society through education.

(2) Culture is Social:

Culture is not individual but social in nature. As a social product culture develops through social interaction which is shared by all.. It is created or originated in society. Hence it is social.

(3) Culture is Transmissive or communicative:

Culture is transmitted from one generation to another. It passes from parents to children and so on. Culture is based on symbol and it communicates through different symbols. Common ideas and social heritage etc. are communicated from one generation to another.

(4) Culture fulfils some needs:

Culture fulfills many social psychological, moral etc. needs of individuals. Culture is created and maintained because of different needs. It fulfills needs of both society as well as individuals.

(5) Culture is shared:

Culture is not possessed by a single or a few individual. Culture is shared by majority of individuals. Hence culture is collective in nature.

(6) Culture is Idealistic:

Culture is idealistic in nature. Because it embodies the ideals, values and norms of the group. It sets ideal goals before individuals which is worth attaining. In other words culture is the sum total of ideals and values of individuals in society.

(7) Culture is accumulative or social heritage:

Culture is not created in one day or one year. It gradually accumulates through centuries. Beliefs, art, morals, knowledge are gradually stored up and became part of culture. Hence culture is the social heritage.

(8) Culture is adaptive or subject to adjustment:

Culture possesses adaptive capacity. It is not static. It undergoes changes. Different aspects of culture adapt with new environment or challenges posed by social and physical environment. Adaptation refers to the process of adjustment. And culture helps man in this process of adjustment.

(9) Culture is Variable:

Culture is variable and changeable. It varies and changes from society to society. Because each and every society has its own culture.

(10) Culture is Organized:

Culture has an order or system and we can say it is an organized things.

Lecture No 8

Elements of Culture and Cultural variation;

Cultural variation refers to the differences in social behaviors that different cultures exhibit around the world.

Elements of Cultural and Cultural variation.

1. Symbols

A symbol help us communicate ideas such as love or patriotism because they express abstract concepts with visible objects. For example, flags can stand for patriotism, nationalism, school spirit, or religious beliefs held by members of a group or society.

2. Language

Language is a set of symbols that expresses ideas and enables people to think and communicate with one another. Verbal (spoken) language and nonverbal (written or gestured) language help us describe reality.

3. Values

Values are collective ideas about what is right or wrong, good or bad, and desirable or undesirable in a particular culture. Values typically come in pairs of positive and negative values, such as being brave or cowardly, hardworking or lazy. Because we use values to justify our behavior, we tend to defend them determinedly.

4. Norms

Norms are established rules of behavior or standards of conduct. Values provide ideals or beliefs about behavior but do not state explicitly how we should behave. Norms, on the other hand, do have specific behavioral expectations. Norms state what behavior is appropriate or acceptable. For example, persons making a certain amount of money are expected to file a tax return and pay any taxes they owe. Norms based on custom direct us to open a door for a person carrying a heavy load or give up our seat for an elderly person on a bus.

There are some kinds of norms

A. Folkways

The word folkways describes norms that are simply the customary, normal, habitual ways a group does things. Folkways carry no moral value. If you choose to violate folkways by having by sleeping on the floor and dyeing your hair purple, others may consider you crazy, but they will not brand you immoral or criminal.

- B. **Mores** are norms associated with fairly strong ideas of right or wrong; they carry a moral meaning. In contrast to folkways, other norms do carry moral value. These norms are called mores (more-ays). Whereas spending your last saving on bids when your child needs shoes may lead others to consider you immoral.
- 5. **Laws** are rules that are enforced and sanctioned by the authority of government. They may or may not be norms. When mores are enforced and sanctioned by the government, they are known as laws.
- 6. **Sanctions** are rewards for conformity and punishments for nonconformity.
- 7. **Social Control** is a system of social pressure that control the actions and behaviors of an individual in society. From our earliest childhood, we learn to observe norms, first within our families and later within peer groups, at school, and in the larger society.

8. Artifacts

It is important element of cultural variation and culture. It is also called material objects, that constitute a society's material culture. In the simplest societies, artifacts are largely limited to a few tools, the huts people live in, and the clothing they wear.

9. Fashion

Fashion is a mode of conduct, a type of folklore that is socially acceptable but subject to periodic change at a given time and element of cultural variation and culture.

10. Custom

Custom is an activity routine shared by one or more of a society's members. It is element of cultural variation and culture.

Lecture No 9

Cultural diversity is cultural difference in a society. The Cultural diversity also occurs within a single society, where different kinds of culture can exist at a time.

Key features of Cultural diversity

1. **Cultural Change;** Culture is always evolving. Moreover, new things are added to material culture every day, and they affect nonmaterial culture as well.
2. **Innovation** An innovation refers to an object or concept's initial appearance in society—it's innovative because it is markedly new and it is important aspect of cultural diversity.
3. **Discovery;** Discoveries make known previously unknown but existing aspects of reality in the society, discoveries are also important aspect of cultural diversity.
4. **Inventions;** Inventions result when something new is formed from existing objects or concepts—when things are put together in an entirely new manner and it result in cultural diversity.
5. **Globalization;** The integration of world markets and technological advances of the last decades have allowed for greater exchange between cultures through the processes of globalization and diffusion.
6. **Diffusion;** while globalization refers to the integration of markets, diffusion relates to a similar process in the integration of international cultures.
7. **Understanding the different kinds of cultures**
Cultural diversity existed in accepting and understanding the different kinds of cultures. It is important to sociologists to look at the various facets of culture.
8. **Material culture** includes all the touchable products created by human interaction. Any physical objects created by humans are part of the material culture. This includes clothing, books, art, buildings, computer software, inventions, food, vehicles, tools, and so on.
9. **Nonmaterial culture** consists of the intangible creations of human interaction. These exist as our ideas, languages, values, beliefs, behaviors, and social institutions.
10. **High culture** consists of things that are generally associated with the social elite.
11. **Popular culture** consists of activities that are widespread in a culture, with mass accessibility and appeal, and pursued by large numbers of people across all social classes.
12. **Subculture;** a subculture is just what it sounds like a smaller cultural group within a larger culture; people of a subculture are part of the larger culture but also share a specific identity within a smaller group.
13. **Counterculture;** countercultures might actively challenge larger society by developing their own set of rules and norms to live by, sometimes even creating communities that operate outside of greater society.

Lecture No 10

Socialization

Definition; Socialization is the process of learning the roles, statuses, and values necessary for participation in social institutions.

Definition; Socialization is the process through which individuals learn their culture and become fully human

Definition; Socialization is a process that introduces people to social norms and customs.

Definition; Socialization is a process that helps individuals function well in society, and, in turn, helps society run smoothly. Family members, teachers, religious leaders, and peers all play roles in a person's socialization.

IMPORTANCE OF SOCIALIZATION

1. **Learn to be part of social intuitions;** during socialization, a person learns to become a member of a group, community, or society.
2. **Enhance the life of Social groups;** this process not only accustoms people to social groups but also results in such groups sustaining themselves.
3. **Learn ones' role in society;** to become a functioning member of society, each of us must be socialized.
4. **Transmission of social norms;** on a macro level, socialization ensures that we have a process through which the norms and customs of society are transmitted.
5. **Form of social control;** Socialization teaches people what is expected of them in a particular group or situation; it is a form of social control.
6. **Control the person's biological impulses;** Socialization has numerous goals for youth and adults alike. It teaches children to control their biological impulses, such as using a toilet instead of wetting their pants or bed.
7. **Help in development of conscience;** the socialization process also helps individuals develop a conscience aligned with social norms and prepares them to perform various roles.
8. **Essential for society;** Structural functionalists would say that socialization is essential to society, both because it trains members to operate successfully within it and because it preserves culture by transmitting it to new generations. Without socialization, a society's culture would perish as members died off.
9. **Reproduces inequality;** A conflict theorist might argue that socialization reproduces inequality from generation to generation by conveying different beliefs and norms to those with different social features. For example, individuals are socialized differently by gender, social class, and race.
10. **Symbolic communication;** an interactionist studying socialization is concerned with face-to-face exchanges and symbolic communication. For example, dressing baby boys in blue and baby girls in pink is one small way we convey messages about differences in gender roles.

Lecture No 11

Agents of socialization

The learning process of any individual is prolonged to his life and he learn social norms and customs from different social institutions at different stages of his life and these social institution are identified in sociology as agents of socialization.

Key agents of socialization are as;

1. Family

Family is the first agent of socialization. Mothers and fathers, siblings and grandparents, plus members of an extended family, all teach a child what he or she needs to know.

2. Peer Groups

A peer group is made up of people who are similar in age and social status and who share interests. Peer group socialization begins in the earliest years, such as when kids on a playground teach younger children the norms about taking turns, the rules of a game, As children grow into teenagers, this process continues.

3. School

School and classroom rituals, led by teachers serving as role models and leaders, regularly reinforce what society expects from children. Sociologists describe this aspect of schools as the **hidden curriculum**, the informal teaching done by schools.

Different jobs require different types of socialization.

4. Work place

Between the ages of eighteen and forty-six, the people went to different place for job and try to prepare themselves to look fit for the job. This means that people must become socialized to, and socialized by, a variety of work environments.

5. Religion

While some religions are informal institutions, here we focus on practices followed by formal institutions. Religion is an important avenue of socialization for many people.

6. Government

Although we do not think about it, many of the rites of passage people go through today are based on age norms established by the government. These government dictates mark the points at which we require socialization into a new category.

7. Mass Media

Mass media distribute objective information to a wide audience, via television, newspapers, radio, and the Internet. With the average person spending over four hours a day in front of the television (and children averaging even more screen time), media greatly influences social norms and play role in socialization.

8. Institutions for Resocialization

There are many institutions for resocialization that are used to bring back the people in society who are missing norms, like prisons, hospitals.

9. Anticipatory institution

These are largely self-directed and refers to the steps one takes to prepare for a new role, position, or occupation like training centers of forces.

10. Literature

Literature played very important role in learning the norms and customs of different societies and idealist form of society, so it is also important agent of socialization.

Lecture No 12

Socialization through life course

The most theories and discussions of socialization concern childhood. However, socialization continues throughout the several stages of the life course, most commonly categorized as childhood, adolescence, adulthood, and old age. Within each of these categories, scholars further recognize subcategories, such as early adolescence and late adolescence and early adulthood and so forth.

Childhood

Despite increasing recognition of the entire life course, childhood (including infancy) certainly remains the most important stage of most people's lives for socialization and for the intellectual, emotional, and physiological development that is so crucial during the early years of anyone's life.

Adolescence

As many readers may remember, adolescence can be a very challenging time. Teenagers are no longer mere children, but they are not yet full adults. They want their independence, but parents and teachers keep telling them what to do.

Early adolescence

Adolescence is divided into two groups early and later. In the early adolescence that is age group of 10-14 teenager started to choose the Peers and pressure of peer is limited. Meanwhile the learning of socialization of teenager mostly started to get influence from peer group.

Late adolescence

In this group of age that is 14 to 20, the socialization has intact in the Peer group and pressure of this group can be massive, and tobacco, alcohol, and other drug use become a serious problem for many teens.

Early Adulthood

Sociologists recognize, early adulthood 20 to 35 that is a time when people's "stakes" in society and conformity become stronger. Many get married, some have children, and most obtain their first full-time job. Who do not have children, do not live in their own home, or do not have sufficient income to become fully independent, this is a time of learning from the family and peers.

Later adulthood

This is age 35 to 60 in which latter individuals may well marry, have children, while those who go to college and especially those who get an advanced degree may wait until their late 30s to take

these significant steps and the process of learning socialization continue from class fellows, peers and other people having direct relationship.

Young Old Age

This stage of the life course unofficially begins at age 60 and till 80. In this age they are inspiring for younger and being consider a leading consultants and decision makers in society.

Old Old-age

those who are older than 80 are in this group, mostly neglected in mainstream but considered wise people to be consider for socialization for their own betterment and youngsters.

Lecture No 13

Socialization theories

1. Charles Horton Cooley Theory

The Looking-Glass Self Charles Horton Cooley (1902) provided a classic description of how we develop our self-concept.

Socialization theory of Cooley;

Sociologist Charles Horton Cooley believed that we form our self-images through interaction with other people. He was particularly interested in how significant others shape us as individuals.

Five ideas about socialization process;

1. **Self-concept;** the self-concept is our sense of who we are as individuals, in terms of both our personalities and our position in society.
2. **Development in Expected views;** Cooley proposed that we develop our self-concept by learning to view ourselves as we think others view us.
3. **Our interpretations of other views;** Our self-concept is not merely a mechanical reflection of the views of those around us; rather it rests on our interpretations of and reactions to their judgments.
4. **Experience of past in interpretation of other views;** We engage actively in defining our self-concept, choosing whose looking glass we want to pay attention to and using past experiences to aid us in interpreting others' responses.
5. **Looking-glass self;** The looking-glass self is a social psychological concept, created by Charles Horton Cooley in 1902, stating that a person's self grows out of society's interpersonal interactions and the perceptions of others.

According to Cooley, there are three steps in the formation of the looking-glass self:

1. **Imagination about our appearance;** We imagine how we appear to others.
2. **Imagination about other judgements;** We imagine how others judge us based on those appearances.
3. **Acceptance or rejection of other views;** We ponder, internalize, or reject these judgments

Lecture No 14

2. George Herbert Mead theory

Sociologist **George Herbert Mead** believed that people develop self-images through interactions with other people.

Socialization Theory of Mead; he argued that the self, which is the part of a person's personality consisting of self-awareness and self-image, is a product of social experience.

To Mead, the self-had two components, which he referred to as the I and the me.

He outlined six ideas about how the self develops:

1. **An active “I” self and an objective “me” self;** Understanding the Role of the Other Results in Self-Awareness is important as Mead posited that there is an active “I” self and an objective “me” self. The “I” self is active and initiates action. The “me” self continues, interrupts, or changes action depending on how others respond.
 2. **Taking the role of the other;** involves imagining ourselves in the role of others in order to determine the criteria they will use to judge our behavior. Mead believed that social experience depends on our seeing ourselves as others do, or, as he coined it, “taking the role of the other.”
 3. **Significant others** are the role players with whom we have close personal relationships.
 4. **The generalized other** combines the expectations of all with whom we interact, Mead believed that the key to self-development is understanding the role of the other. He also outlined steps in the process of development from birth to adulthood.
 5. **Social Experience Consists Of The Exchange Of Symbols.** Mead emphasized the particularly human use of language and other symbols to convey meaning.
 6. **The Self Develops Solely Through Social Experience.** Mead says self that is part of personality develops through the social experience but this process is very slow.
1. **Use of I and Me;** In English grammar, we use the word I when we do something and use the word me when someone else does something to us (“I disobeyed my mom. Then she punished me.”).
 2. **Mead use of I and Me;** Mead used the word I to refer to the spontaneous, creative part of the self and the word me to describe the part of the self that responds to others’ expectations.
 3. **I and Me in socialization;** Mead argued that we learn to function in society and to balance the desires of the I with the social awareness of the me through the process of role taking.
 4. **Importance of childhood;** According to Mead, role taking begins in childhood, when we learn the rights and obligations associated with being a child in our particular family.
 1. **Importance of Parents views;** To understand what is expected of us as children, we must learn our mother’s and father’s views. We must learn to see ourselves from our parents’ perspective and to evaluate our behavior from their point of view. Only when we have learned their views as well as our own will we really understand what our own obligations are.

2. **Importance of games;** Mead maintained that children develop their knowledge of how to function in society by playing games. When children play, they develop their ideas of how different sorts of adults relate to one another, based on what they see in the world around them.
3. **Importance of siblings;** children's play often focuses on the behavior of their significant others—individuals with whom they have close personal relationships. Parents and siblings, for example, can deeply affect children's self-concepts.
4. **Importance of generalized other;** Eventually, they come to judge their behavior not only from the perspective of significant others but also from what Mead calls the generalized other (including their teachers, neighbors, and employers) the composite expectations of all people with whom they interact. Learning the expectations of the generalized other is equivalent to learning the norms and values of a culture.
5. **Importance of process of socialization from childhood to old age;** through this process of socialization we learn how to act like a Pakistani, Iranian, Syrian etc. Saying that everyone learns the norms and values of the culture does not mean that everyone will behave alike or that everyone will follow the same rules.
6. **Individual personality;** In addition to having unique personalities, each of us has a different set of significant others, each grows up within certain cultures and subcultures, and each has different levels of access to social resources such as education and money. As a result, we may be more or less inclined to follow society's rules and more or less able to choose a different path.

Lecture No 14

Social structure.

Social life is composed of many levels of building blocks, from the very micro to the very macro. These building blocks combine to form the **social structure**.

Social structure; social structure refers to the social patterns through which a society is organized and can be horizontal or vertical.

Horizontal social structure; horizontal social structure refers to the social relationships and the social and physical characteristics of communities to which individuals belong.

Vertical social structure, vertical social structure, refers to ways in which a society or group ranks people in a hierarchy and more commonly called social inequality.

Components of social structure

The major components of social structure are

1. **Statuses;** Status is the position that someone occupies in society.
2. **Roles;** roles are the behavior expected of people in various statuses i.e. Cash taking role of a cashier.
3. **Social networks;** A social network is the totality of relationships that link us to other people and groups and through them to still other people and groups. Facebook, twitter

4. **Social Groups; A social group** (hereafter just *group*) consists of two or more people who regularly interact on the basis of mutual expectations and who share a common identity,
5. **Social organizations; social organization** (also just *organization*), which is a large group that follows clear rules and procedures to achieve specific goals and tasks.
6. **Social institutions;** social institutions are patterns of beliefs and behavior that help a society meet its basic needs.
7. **Society;** society is a group of people who live within a defined territory and who share a culture.

Lecture No 16

Statuses

Status; *Status* is the position that someone occupies in society. This position is often a job title, but many other types of positions exist: student, parent, sibling, relative, friend, and so forth.

Compare the ascribed status and achieved status 2015

Types of statuses

Sociologists usually speak of **three types of statuses**.

Ascribed status;

A status that someone is born with and has no control over.

There are relatively few ascribed statuses; the most common ones are our biological sex, race, parents' social class and religious affiliation, and biological relationships (child, grandchild, sibling, and so forth).

Achieved status;

The status you achieve, at some point after birth, sometimes through your own efforts and sometimes because good or bad luck befalls you.

The status of student is an achieved status, as is the status of restaurant server or romantic partner, to cite just two of the many achieved statuses that exist.

Two things about achieved statuses should be kept in mind.

1. Ascribed statuses, and in particular our sex, race and ethnicity, and social class, often affect our ability to acquire and maintain many achieved statuses (such as college graduate).
2. Achieved statuses can be viewed positively or negatively. Our society usually views achieved statuses such as physician, professor, or college student positively, but it certainly views achieved statuses such as burglar, prostitute, and pimp negatively.

With an example explain Master Status. 2018

Master status;

A status that is so important that it overrides other statuses you may hold.

Positive master status; In terms of people's reactions, master statuses can be either positive or negative for an individual depending on the particular master status they hold. Barack Obama now holds the positive master status of president of the United States: his status as president overrides all the other statuses he holds.

Negative master status; some master statuses have negative consequences like a physical disability often becomes such a master status. If you are bound to a wheelchair, for example, this fact becomes more important than the other statuses you have and may prompt people to perceive and interact with you negatively.

Lecture No 17

Roles

Role is defined as the behavior expected of someone and in fact everyone with a certain status. Roles help us interact because we are familiar with the behavior associated with roles.

Example; cashier in shop is to accept your payment in a businesslike way and put your items in a bag and shopper is to watch things and buy according to his needs. Because shoppers and cashiers all have these mutual expectations, their social interaction is possible

Characteristics of the Role:

1. Action Aspect of Status:

The role is in fact the action aspect of status. It involves various types of actions that a person has to perform in accordance with the expectations of the society.

2. Changing Concept of Role:

Social roles as already stated, are in accordance with the social values, ideals, patterns etc. These ideals, values and objects change and so the concept of the role also changes. The role which is justified at a particular time may not be justified at some other time.

3. Limited Field of Operation:

Every role has a limited area of operation and the role has to be confined within that. For example an officer has a role to play in the office but when he reaches his family, that role ceases.

4. Roles are not Performed 100% for the Fulfillment of the Expectations:

It is not possible for anyone to perform his role fully in accordance with the expectations of the society. There is bound to be some distinctions. For example one may not be able to perform his role to the full satisfaction of the children.

5. Difference in the Importance of Role:

From the socio-cultural point of view all the roles are not equally important. Some of the roles are more important while the others are less. The roles that are most important are called key roles while the roles that are of general importance, are called general roles.

Briefly explain the relationship between status and role.

1. The terms 'role' and 'status' are inter-related:

A status is simply a position in society or in a group. A 'role' is the behavioral aspect of status. Statuses are occupied and roles are played. A role is the manner in which a given individual fulfills the obligations of a status and enjoys its privileges.

2. Role is a relational term:

An individual plays a role versus another person's role, which is attached to a 'counter-position'.

3. Role and status point out two divergent interests:

Status is a sociological concept and sociological phenomena. On the other hand, role is a concept and a phenomenon of social psychology.

4. Both are dynamic:

Role changes with each new incumbent in a status. Though status and role are co-related, it is possible to have one without the other. A status without a role may simply denote an unfulfilled position in an association. In the same way, roles are often played without occupying a status

What is role conflict? Give brief explanation

Role Conflict:

Role Conflict role conflict involves more than one role interacting with another. it is a social-psychological concept used to investigate and explain individual's experiences of competing or conflicting demands.

- **Role conflict: tension between two or more roles**

- Competing expectations between two roles held by same person

1. Conflict of roles arises when one has to perform number of roles or when one feels that the role assigned to one is not in agreement with his status.
2. An individual has to play different roles in different groups. His role as the head of the family may come into conflict with his role as a doctor. He may at times be asked to sacrifice his obligations.

Mechanism for dealing role conflict

1. Role conflict may be handled through a hierarchy of obligations. Individuals interacting with one another usually recognize that certain obligations take precedence over others.
2. Individuals can also handle their role conflict through banding together for mutual support and concerted action.

3. Still another mode of individual resolution takes the form of reducing dependence on the group or role partner supporting one of the expectations. Individuals achieve this by leaving the group by redefining its value to them or by making it irrelevant to the conflict situation.

Role strain; Role strain is a tension that occurs when a person is facing a single **role** having multiple statuses.

- **Role strain: tensions within one role**
 - Competing demands within the same social role
 - Role strain is easily defined as stress occurring within a role.

It occurs when a person has difficulty meeting the responsibilities of a particular role in his or her life. For example a domestic mother is preparing breakfast for her kids and same time she wishes to press school uniform

There are several ways in which people can try to reduce the stress

1. **Classifying.** People may try to not think about the conflict between two different roles.
2. **Delegating to others.** People may find someone else who can help with some of their responsibilities; for example, a busy parent might hire a housekeeper or childcare provider to assist them.
3. **Giving up a role.** Someone may decide that a particularly difficult role isn't essential and may give up the role or switch to a less demanding one. For example, someone who works long hours might quit their demanding job and look for a role with better work-life balance.

A status set it is a collection of social statuses that an individual holds. A person may have same time status of a daughter, wife, mother, student, worker, church member and a citizen. The term "status set" was coined by Robert K. Merton in 1957. He made a clear distinction between a "role set" and a "status set".

Role set; Role set is the term used to describe the variety of roles and relationships you have as a result of your status in society.

For instance, a student interacts with a variety of different people as he goes through the school, including teachers, the principal and administration, and his peers. His role set includes the different behaviors, or roles, he uses to meet the demands of this one social status of 'student.'

Lecture No 18

Social Construction Of Reality ; The term Social Construction Of Reality refers to the theory that the way we present ourselves to other people is shaped partly by our interactions with others, as well as by our life experiences.

Features

1. **Belief and background effect our perception of reality;** our perceptions of reality are colored by our beliefs and backgrounds.
2. **Real is what socially acceptable;** what is real depends on what is socially acceptable.
3. **Social interactions involve acceptance;** most social interactions involve some acceptance of what's going on.
4. **Our part in construction of reality is not entirely our product;** despite the fact we participate in the construction of reality, it's not entirely a product of our own doing.
5. **Dependency of definition depends on background knowledge;** how we define everyday situations depends on our respective backgrounds and experiences.

For example; the wealthy individual has learned through interactions with others that spending money on one's pets is a worthy expense. His reality is one of pride. The minimum-wage worker has learned through interactions with others spending that much money on a pet is a negative thing, so his perception of the situation is entirely different.

Lecture no 19

Ethnomethodology, as founded by sociologist **Harold Garfinkel**, is a theory that looks at how we make sense of everyday situations.

Meanings of ethnomethodology;

Ethno; related to culture

Method; how we use the knowledge;

Ethnomethodology; how we use knowledge related to culture to understand the social interaction and construct social reality.

Definition; Ethnomethodology is a theoretical approach in sociology based on the belief that you can discover the normal social order of a society by disrupting it.

Features.

1. **Accountability;** it is accountability of our day to day living and understandings about social construction of reality.
2. **indexicality** Indexicality suggests that we cannot take any meaning for granted as fixed or clear. However, we do this in everyday life.
3. **reflexivity** what enables us to behave as if meanings are clear and obvious is reflexivity.
4. **Alternate to mainstream sociological approach.** It generally seeks to provide an alternative to mainstream sociological approaches.
5. **It challenge all the social sciences;** in its most radical form, it poses a challenge to the social sciences as a whole.

6. **It is study of commonsense understandings;** It is the study of how people use commonsense understandings to get through everyday life as these understandings shape our assumptions about social interactions and to construct social reality.
7. **It study the assumption about social realities;** the study of assumption that played role in development of our sense about the social reality.

Objectives of ethnomethodology

1. **To uncover the social assumption** To uncover the social assumption that help us in construction of social reality.
2. **To Disturb the normal rules of indication;** Ethno methodologists are interested in disturbing the normal situations of interaction to uncover taken-for-granted rules
3. **To reject the idea about society;** Reject the idea of society as real objective structure.
4. **To Uncover the established ideas use to construct social reality;** the real purpose of this theory to understand the social reality is to uncover the established ideas use to construct social reality

Example: In the United States, one background assumption is that emergency personnel, such as police officers, wear identifiable uniforms when on duty. An officer at an accident scene who is wearing everyday clothes might find that crowds won't obey someone who claims to be a police officer but is without a uniform. The officer might have difficulty keeping onlookers at bay or redirecting traffic away from the scene. When the background assumption is not fulfilled, members of the public will not respond as respectfully as they would if the officer were in uniform, and the officer will have a hard time performing required duties

Lecture No 20

Social group:

A collection of humans or animals that share certain features, interact with one another, accept expectations and obligations as members of the group, and share a common identity.

Meaning: A social group is a collectivity of two or more individuals who are in state of interaction with one another.

TYPES OF SOCIAL GROUPS

On the basis of contact among the member, social groups are divided into two; Primary and Secondary Group.

1. Primary Group

The concept of Primary Group is given by CH Cooley. Primary groups have following

Features:

- a. There is face-to-face interaction among its members.
- b. There are frequent interactions among its members.
- c. The relations among the members are too personal, intimate and intense.
- d. They possess similar background attributes such as language, interests, culture, religion etc & there is physical proximity among the members.
- e. These groups are smaller in size. Examples: Family, Neighborhood, Local brotherhood, Close friends and members. Primary groups have a great importance.

2. Secondary Group

The concept of Secondary Group is given by Maciver. Secondary groups have following

Features:

- a. The group is formed by relations secondary to the primary group.
- b. There is comparatively less face-to-face interaction.
- c. There is comparatively less frequent interaction.
- d. The relations among the members are impersonal and secondary.

3. In-group on the basis of identification W.G. Sumner has divided social groups into two in-group and out-group.**Features of In Group**

1. A group, to which we directly belong, is called our in-group. It can be our own family, tribe, occupation, games or interest group.
2. The members of in-group have a sense of 'we-feelings' and belongingness towards their in-group.
3. A geographical community is in-group for its residents.
4. The term 'in-group' is used when an individual wants to identify himself with a group or show an association with his group, such as by saying: We are Americans are English. We are Christians. We are Muslims. We are students we are musicians.
5. For example, if I am player of a cricket team, my cricket-team is in-group for me. A religious group is in-group for its followers.

4. Out-group .**Feature**

1. A group, to which we do not belong, is called an out-group It can be any group of others (not ours) including a family, tribe, ethnicity, sex, occupations or interest groups.
2. The term 'out-group' is used to distinguish one's identity from that of others or to compare one's identity to that of other, such as by saying: We are Americans (in-group) and they are Indians (out-group).
3. There is a sense of 'they-feeling' while referring to an out-group.

For example, If I am a student of Psychology, the students of psychology are in-group for me, but the students of any other discipline (other than psychology) are an out-group for me. We are Muslims (in-group) and they are Christians (out-group). We are doctors (in-group) and they are engineers (out-group).

5. Formal Group

There are two types of social groups on the basis of rules and regulations: Formal and Informal Group.

Features of Formal Group;

1. It is a group that has well-defined rules and regulation for joining the group, staying in the group and leaving the group.
2. Those, who fulfill these rules and regulations, can join and engage in the activities of the group.
3. The can be canceled if the member violates the rules.

The examples include organizations, banks, hospitals, educational, institutions, official associations and firms and so on.

2. Informal Group

1. It is a group which has prescribed rules and regulation for joining the group, staying in the group and leaving the group.
2. Any person can join the group, participate in it and leave it whenever he wants.

For example, a group of students sitting in playground and gossiping with one another. Any other classmate can come and join it. Other examples include: People gathered to see a Joker in a public place, informal clubs and associations.

3. Involuntary Group

Sanderson has divided social groups on the basis of structure into three types: Voluntary, Involuntary and Delegate group

Involuntary Group

- a. It is a group that an individual cannot join or leave by his or her own choice.

For example, family is an involuntary group because an individual has no control over his birth - to be born or not born in a specific family. Similarly, the sex-group is an involuntary group to which we are born without our choice and we have no control on changing our sex-group (e.g. from male to female or vice versa). Age-group is also an involuntary group. We belong to our age group which changes with growth but we have no control on changing our age group.

4. Voluntary Group

- a. It is a group that an individual can join or leave by his or her own choice.

For example, you can join watching a game in the playground, can become a student in a college, you can join an organization and so on. Sometimes, you are required to fulfill criteria to join a voluntary group but still, it is in your control to fulfil the criteria and join it.

5. Delegate Group

- a. It is a group that serves as a representative of the larger number of people.
- b. The members are either elected by the people or nominated on the basis of certain criteria.

Example A parliament is a delegate group as it represents wishes and needs of the public. Similarly, a group of experts, sent to another country to discuss an issue on behalf of their country, is a delegate group.

10. On-social Group

George Hassen has divided social groups on the basis of its relation to society into following four types:

- a. It is a group that remains detached within a society.
- b. They do not participate in the society and remains alone.

The examples are intruders, people with adjustment problems or anomalies, drug addicts, criminals, thieves, and murders.

1. Anti-social Groups

- a. It is a group that acts against the interest of the society.
- b. . They destroy public property and peace.
- c. They intend to spread fear and aggression to pursue their aims.

Examples include the terrorist groups, criminals, thieves, and murderers. Similarly, a group of laborers on strike against the administration of a factory, students demonstrating protest, people gathered to demonstrate against the government may also sometimes violent and anti-social groups.

2. Pro-social Group

- a. It is a group that works for the betterment of the society.
- b. They engage in activities for the development, prosperity, welfare, and peace in the society.
- c. All the governmental and non- governmental welfare organizations are the examples of pro-social groups who work promoting education, reducing poverty, providing health care, treating drug addicts, helping the underprivileged people and rehabilitating the grievred ones in the society.

3. Pseudo Group

- a. It is a group that participates in the society only for their own interest and gains. They do not care about the interest of others or betterment of society.
- b. They are concerned only about their own gains and benefits.
- c. They behave in a predatory or parasitic way in the society.

4. Reference groups

1. Reference groups provide a standard for guiding and evaluating our attitudes and behaviors.
2. Primary and secondary groups can act both as our reference groups and as groups that set a standard for guiding our own behavior and attitudes.

Lecture No 21

Group/ social group

A **group** can be defined as two or more interacting and interdependent individuals who come together to achieve particular objectives.

Group Behavior;

Group Behavior refers to people with a similar goal behaving in the same way, which might be different from how they would normally behave if they were alone or as individuals.

A group behavior can be stated as a course of action a group takes as a family.

Types Of Group Behaviour

There are two major types of group behaviour and they are **collective behaviour** and **community services**. Other forms of group behaviour include crowd behaviour, herd behaviour and public or mass behaviour.

(1) Collective Behavior: This includes social behavior such as action and industrial action. It is defined by the fact that individuals come together to express a preference for, or a grievance against, a given social situation.

Features of Collective Behaviour

- I. Collective behaviour such as mass action is often based on a grievance or preference for change shared by members of a social group.
- II. The mass action may be natural, in the sense that it may not have been planned in advance but may have been based on a perceived injury.
- III. Collective behavior sometimes requires a formal organizational and administrative or leadership structure that organizes the diverse interests of members.
- IV. Collective behavior is the means by which individuals make their ideas, opinions and feelings known in a group situation.
- V. Collective behavior (such as mass action) is always undertaken primarily for the interests of members of a given group.

(2) Community Services: These are actions taken by corporate groups or individuals to improve the lots of communities. Usually, community services are directed at areas of need and very often, they take the form of corporate social responsibility or philanthropy.

Benefits of Group Behavior

When people act or behave collectively, certain benefits or advantages are grasped. Some of these advantages are stated below:

1. **More benefit;** People achieve more when they act collectively. What one person cannot do properly can be done well when people try to do it as a group.
2. **Changes are result of group behavior;** Changes in a society are usually brought about by group Behaviour..
3. **Speedy help;** During emergency situations, help comes quickly or action is taken speedily to stop bad situations getting worse.
4. **Revival of good habits;** Group behaviour may bring about a revival or renewal of a good habit that has been lost or forgotten.
5. **Sense of Unity;** When there is group behaviour, people tend to feel a sense of unity, even if that spirit of unity does not last for long.

Lecture No 22

Bureaucracy;

Bureaucracy constitutes the most efficient and rational way in which human activity can be organized and that systematic processes and organized hierarchies are necessary to maintain order, to maximize efficiency, and to eliminate favoritism. **Max Weber**

Characteristics of bureaucracies identified by Weber

According to Weber, these are the six characteristics of bureaucracy:

1. **Task specialization (division of labor).** Weber felt that task specialization promotes the timely completion of work at the highest level of skill. Tasks, therefore, in Weber's ideal organization are divided into categories based on team members' competencies and areas of expertise.
2. **Hierarchical management structure.** Weber advocated that management should be organized into layers, with each layer being responsible for its team's performance.
3. **Formal selection rules.** In the ideal organization, Weber believed that employees should be chosen based on their technical skills and competencies, which are acquired through education, experience or training – no other factors should be considered.

4. **Efficient and uniform requirements.** Employees, argued Weber, should always know exactly what is expected of them. In the ideal organization, the rules are clearly defined and strictly enforced.
5. **Impersonal environment.** Under Weber's theory, relationships between employees are to be only professional only.
6. **Achievement-based advancement.** Weber felt that promotions within an organization should be based solely on achievement, experience and technical qualifications.

General Characteristics of the ideal bureaucracy

Clearly defined job roles

Weber believed that responsibilities should be delegated based on skill and ability.

Careful record-keeping

According to Weber, leaders should take notes on every position, occurrence or concern that involves the company. That way, they can refer to it later and handle any issues accordingly.

Hiring based solely on specific qualifications

Weber advocated that only the most ideal candidates with the exact skill set required for the position should be hired to ensure the best results.

Work-appropriate relationships only

Weber did not condone any type of personal relationship in the workplace. He supported the notion that all work relationships are bound by rules and regulations.

Division of Work

Work of the organisation is divided on the basis of specialisation to take the advantages of division of labor. Each office in the bureaucratic organisation has specific sphere of competence.

Advantages of Bureaucracy:

The following are the advantages of Bureaucracy:

1. **Consistency in behavior;** The rules and procedures are decided for every work it leads to, consistency in employee behaviour.

2. **Define role;** The duties and responsibilities of each job are clearly defined there is no question of overlapping or conflicting job duties.

3. **Merit in selection;** The selection process and promotion procedures are based on merit and expertise. It assists in putting right persons on right jobs.

4. **Division of labor** The division of labour assists workers in becoming experts in their jobs. The performance of employees improves considerably.

5. **No-dependency on individual;** The enterprise does not suffer when some persons leave it. If one person leaves then some other occupies that place and the work does not suffer.

Disadvantages of Bureaucracy:

The following are the disadvantages of Bureaucracy:

1. **red-tape;** This system suffers from too much of red tape and paper work.

2. **No personal relation to organization;** The employees do not develop belongingness to the organisation.

3. **Neglecting, human behavior;** The excessive reliance on rules and regulations and adherence to these policies inhibit initiative and growth of the employees. They are treated like machines and not like individuals. There is neglect of human factor.

4. **Resistance against change;** The employees become so used to the system, they resist to any change and introduction of new techniques of operations.

Drawbacks Weber's model; Weber's model has some drawbacks. It has

1. **Rigidity**
2. **Impersonality,**
3. **Excessive cost of control,**
4. **Excessive dependence on superiors,**
5. **Tendency to ignore organizational goals.**

Lecture No 23

Deviance: Deviance is behavior that violates social norms and arouses negative social reactions.

Definition

Deviance is a violation of established contextual, cultural, or social norms, whether folkways, mores, or codified law. **William Graham Sumner**

Deviance; Deviance is behavior that violates social norms and arouses negative social reactions. Some behavior is considered so harmful that governments enact written laws that ban the behavior.

Crime: Crime is behavior that is considered so serious that it violates formal laws prohibiting such behavior.

Social control; Social control refers to ways in which a society tries to prevent and sanction behavior that violates norms.

Émile Durkheim believed that deviance is a normal part of every society.

1. Social Strain Typology

- A. **Developed by** American sociologist Robert K. Merton. Merton proposed a typology of deviant behavior.
- B. **Definition;** Merton's typology is fascinating because it suggests that people can turn to deviance in the pursuit of widely accepted social values and goals.
- C. **Criteria;** Merton typology of deviance was based on **two criteria:**
 - (1) A person's motivations or adherence to cultural goals.
 - (2) A person's belief in how to attain her goals.
- D. **Types of Deviance;** According to Merton, there are five types of deviance based upon these criteria: **1. Conformity, 2. innovation, 3. ritualism, 4. retreatism 5.rebellion.**

2. Structural Functionalism

- A. **Definition;** Structural Functionalism argues that deviant behavior plays an active, constructive role in society by ultimately helping to cohere different populations within a particular society.
- B. Deviance helps to distinguish between acceptable and unacceptable behavior.
- C. It draws lines and demarcates boundaries.
- D. This is an important function that affirms the cultural values and norms of a society for the members of that society.

3. Conflict theory

- A. **Definition;** Conflict theory suggests that deviant behaviors result from social, political, or material inequalities of a social group.
- B. In response to these inequalities, certain groups will act deviantly in order to change their circumstances, change the social structure that engendered their circumstances, or just to "act out" against their oppressors.

4. Labeling Theory

- A. **Definition;** Labeling theory refers to the idea that individuals become deviant when a deviant label is applied to them; they adopt the label by exhibiting the behaviors, actions, and attitudes associated with the label.
- B. **Identity Labeling;** Labeling theory argues that people become deviant as a result of others forcing that identity upon them.
- C. The view that extralegal factors affect whether someone acquires a deviant label and that being labeled deviant increases the chances of future deviance

Social control; Social control is described as a certain set of rules and standards in society that keep individuals bound to conventional standards as well as to the use of formalized mechanisms.

Social Control Theory: Social control theory proposes that people's relationships, commitments, values, norms, and beliefs encourage them not to break the law.

Two types of social control

- **Internal Control;** Internal means of control, such as an individual's own sense of right and wrong, decrease the likelihood that one will deviate from social norms.
- **External Control;** External means of control, individuals conform because an authority figure threatens sanctions if the individual disobeys.

Means of social control

1. Conformity

Social control is established by encouraging individuals to conform and obey social norms, both through formal and informal means. Conformity is the act of matching attitudes, beliefs, and behaviors to group norms.

2. Obedience

In human behavior, obedience is a form of social influence in which a person accepts instructions or orders from an authority figure.

3. **Sanctions;** the means of enforcing rules are known as sanctions. Sanctions can be positive as well as negative.

Positive sanctions are rewards given for conforming to norms. A promotion at work is a positive sanction for working hard.

Negative sanctions are punishments for violating norms. Being arrested is a punishment for shoplifting. Both types of sanctions play a role in social control. This is part of formal sanctions such as fines

Lecture No 24

Crime

A crime is defined as any act that is contrary to legal code or laws.

Definition; A **crime** is an offence that merits community condemnation and punishment, usually by way of fine or imprisonment

Types of crime

- **Drug crimes.** The drug-crime category encompasses a range of offenses connected with the use, transportation, purchase, and sale of illegal drugs.

- **Street crime.** The most common forms of predatory crime—rape, robbery, assault, burglary, larceny, and auto theft—occur most frequently on urban streets. Racial minority citizens account for a disproportionately high number of the arrests for street crimes.
- **Organized crime.** The term “organized crime” refers to the unlawful activities of members of criminal organizations that supply illegal goods and services.
- **Political crime.** The political-crime category contains both crimes by the government and crimes against the government. Political goals motivate political criminals.
- **Victimless crime.** Consensual acts (in which people are willing participants) and violations in which only the perpetrator is hurt, such as the personal use of illegal drugs, are called victimless crimes.
- **White-collar crime.** White-collar crimes are offenses that persons commit while acting in their legitimate jobs and professions.
 1. White-collar criminals behave in unethical ways for self-gain.
 2. For the benefit of a business (for example, corporate price-fixing).
 3. Victims of white-collar crime include the economy, employers, consumers, and the environment.
 4. Identification and punishments are rare in white collar crime
- **Hate Crimes.** Hate crimes are crimes against persons or property that are committed while invoking prejudices of race, gender or gender identity, religion, disability, sexual orientation, or ethnicity.
- **Crimes against Persons.** Crimes against persons also called personal crimes, include murder, aggravated assault, rape, and robbery.
- **Crimes Against Property.** Property crimes involve the theft of property without bodily harm, such as burglary, larceny, auto theft, and arson.
- **Crimes Against Morality.** Crimes against morality are also called victimless crimes because there is no complainant or victim. Prostitution, illegal gambling, and illegal drug use are all examples of victimless crimes.
- **Organized Crime**
Organized crime is committed by structured groups typically involving the distribution and sale of illegal goods and services. Many people think of the Mafia when they think of organized crime, but the term can refer to any group that exercises control over large illegal enterprises (such as the drug trade, illegal gambling, prostitution, weapons smuggling, or money laundering).
