

## Question 1:

Explain the steps required to create a menu on a form using the menu editor.

---

# Explain the steps required to create a menu on a form using the menu editor.

---

- ✓ **Menu Bar:**
- ✓ It is a collection of different menus. When the user clicks on an item on the menu bar, it displays a list of menu items.
- ✓ Menus allow you to arrange commands in a logical and easy-to-find fashion.
- ✓ A menu shouldn't contain paragraphs of text, or even long sentences; its sole purpose is to help you navigate through the entire program.

## Creating a Menu

- ✓ Click the MenuEditor component at the bottom of the screen. This will allow you to start entering menu items. Type in File and press Enter.
- ✓ Click File, then underneath File where it displays text, type Open.
- ✓ Repeat the steps to enter the Save, Recent, and Exit items to the File menu.
- ✓ Add a menu item 'Edit' next to File and Add Cut, Copy, and Paste underneath it.
- ✓ Add a Help menu with About, and Online items.

Now that you have the main menu sorted, let's take it a step further and add a submenu to the Open menu item. To do this, follow these steps:

- ✓ Click the Open menu item.
- ✓ To the right of the Open menu item, you should see the 'Type Here' section.
- ✓ Enter Text.
- ✓ Underneath the Text menu item, enter Other

# Develop a project that displays first 10 odd numbers using Do...Until Loop.

---

```
Private Sub Command1_Click()
```

```
Dim C As Integer
```

```
C = 0
```

```
Do Until C >= 20
```

```
    IF C Mod 2 <> 0 THEN
```

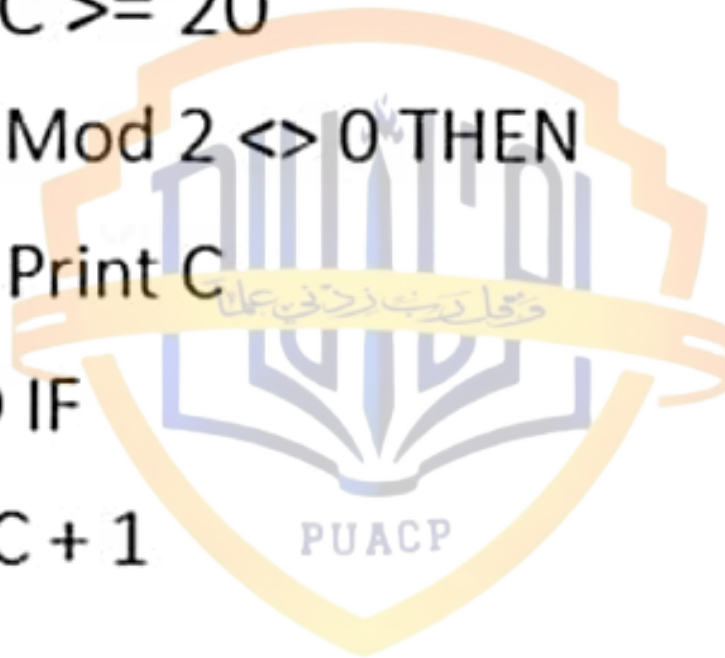

```
        Print C
```

```
    END IF
```

```
    C = C + 1
```

```
Loop
```

```
End Sub
```

# Explain MDI and IDE in detail

---

## MDI (Multiple Document Interface)

- ✓ Visual basic provides MDI form for applications with many forms.
- ✓ An MDI form acts as a container for child form. MDI form is also called the parent form.
- ✓ All other forms in the project that open in MDI form are called child forms.
- ✓ A project can have only one MDI form but any number of child forms.
- ✓ Many familiar programs are MDI Applications, such as Microsoft office applications.
- ✓ For example when you start MS Word, the first windows appears as multiple document interface. All files are opened in MDI.

- ✓ Important Features of MDI Form:
- ✓ When an application with a MDI is started, it is the MDI frame that gets displayed. For example when you start MS Word, the first window that appeared is called MDI window. 
- ✓ It acts as a container to all other windows in the application. All other windows in the application open within MDI window.
- ✓ The windows that open within MDI window are known as child window. You can open many other child windows in MDI window.
- ✓ No MDI child windows can be moved out of the MDI window area.

# IDE (Integrated Development Environment)

- ✓ An integrated development environment (IDE) is a software application that helps programmers develop software code efficiently.
- ✓ It increases developer productivity by combining capabilities such as software editing, building, testing, and packaging in an easy-to-use application.
- ✓ Just as writers use text editors and accountants use spreadsheets, software developers use IDEs to make their job easier.

# Why are IDEs important?

- ✓ You can use any text editor to write code.
- ✓ However, most integrated development environments (IDEs) include functionality that goes beyond text editing.
- ✓ They provide a central interface for common developer tools, making the software development process much more efficient.
- ✓ Developers can start programming new applications quickly instead of manually integrating and configuring different software.
