Question #03 (Long)

Module Module 1

Sub Main()

Dim array1() As Integer = {1, 2, 3, 4, 5}

Dim array2() As Integer = {1, 2, 3, 4, 5}

If Array are equal (array1, array2) then

Console.WriteLine (The arrays are equal)

Else

Console.WriteLine (The arrays are not equal)

End If

Console.ReadLine()

End Sub

Function Arrays areEqual (arr1() As Integer,
arr2() As Integer) As Boolean

If arr1.Length < arr2.Length Then

Return False

End if

For i as Integer = 0 To arr1.Length - 1

if arr1(i) <> arr2(i) Then

Return False

End if

Next

Return true

Er

Question # 03

Module Module

Sub Main ()

Dim numbers as Integer

{45, 22, 89, 16, 5, 78, 99, 34}

Find maximum and minimum value

Dim max value as integer

Find max (numbers)

Dim min value as integer

Find min (numbers)

Output the results

Console write line (maximum)

Value in the array (max)

Console write line (minimum)

Value in the array (min)

Console read line ()

End Sub

Function Find max array () as integer
As integer

```
Dim max as integer = arr(0)
For i as integer = 0 To arr length
```

```
    If arr i > max then
        max = arr i
```

```
    End if
Next
```

```
Return max
```

```
End Function
```

```
Function find min arr() as integer
    As integer
```

```
    Dim min as integer = arr(0)
```

```
    For i as integer = 1 To arr
        length - 1
```

```
        If arr (i) < min then
            min = arr (i)
```

```
        End if
```

```
Next  
Return min  
End Function  
End Module
```

Question # 02

Module Diagonal Sum

Sub main()

```
Dim Matrix (,) As Integer = {  
    { 1, 2, 3, 4 }  
    { 5, 6, 7, 8 }  
    { 9, 10, 11, 12 }  
    { 13, 14, 15, 16 }  
}
```

```
Dim row as Integer = matrix.get length (0)  
Dim cols as Integer = matrix.get length (1)
```

Dim main diagonal sum as Integer = 0
Dim anti Diagonal sum as Integer = 0

Console.WriteLine(matrix(i, j).ToString(),

Next

Console.WriteLine()

Next

For i as integer = 0 To Math.Min
(rows, cols) - 1

mainDiagonalSum += matrix(i, i)

Next

If rows = cols Then

For i as integer = 0 To rows - 1

antiDiagonalSum += matrix(
(i, (rows - 1) - i)

Next

Else

Console.WriteLine()

End if

```
Console.WriteLine('Main diagonal sum')  
If rows = cols Then  
    Console.WriteLine('Anti diagonal sum')  
End If  
Console.ReadLine()  
End Sub  
End Module
```
