

People lie more on the phone than by email

Summary:

The first study to compare honesty is that people lie on phones as well as emails. It is all about people lie more on phones than by email. The fact is that emails are

people lie more on phones than by emails. The fact is that emails are automatically recorded and come back to haunt you. Jeff Hancock made a research on 30 students of university to

keep a communication diary for a week. In it they noted the number of conversations or email exchange they had listen more than 10 minutes and confess to

or email exchange they had listen more than 20 minutes and confess to how many lies they told. After that he found that lies made up of 21% of instant, 14% of emails, 27% of face to face interaction and 37% on phone calls. His result surprised the psychologist. Because some people believe that email is the biggest source of liars and some thought that face to face exchanges. They lie at spontaneous response of unexpected

demand. People are more likely to lie in real time because our answers are spontaneous. Hancock's research can be used by the companies to work out for their employees to communicate. For instance, phones might be the best medium for sales.

New year, new debate

Summary:

Three years ago a scientist of Scotland claimed that GM potatoes made his rats ill. Due to which question about the safety of GM crops arouse. Since then we have seen the world split into two camps. As US is in support of GM crops while in Europe many countries

camps. As US is in support of GM crops while in Europe, many countries have imposed bans on growing GM crops. In 2003, GM debate was held between both parties to rethink their point of view.

Last year, Indian government gave go-head for growing GM cotton and set their farmer free from using harmful pesticides. India is cultivating variety of

for growing GM cotton and set their farmer free from using harmful pesticides. India is cultivating variety of potatoes with extra protein which may be answer to hunger in many countries. So European Union is likely to implement rules regard to GM crops because, when GM food is grown or imported, it can be traceable. As European are not in support of GM food, in order to help the people

potatoes with extra protein which may be answer to hunger in many countries. So European Union is likely to implement rules regard to GM crops because, when GM food is grown or imported, it can be traceable. As European are not in support of GM food, in order to help the people of Africa which are dying because

of hunger, British government called a "national debate" to commission new re-posts. But the rule has broken out over derisory of money set aside for national debate and status of reports is confused.

The Way Ahead

Summary:

In research of three years since researchers at Roslin institute presented Dolly the sheep. When it is represented the biologist and the people become stunned because the cloning technology should be applied to humans. Scientist started to meddle with nature. Objection was aroused

applied to humans. Scientist started to meddle with nature. Objection was aroused because cloning depends upon human embryos. Now it seems less worry because scientist will try to make copies of

of human in growing tissues of plant stem and patients. Neural cells will make with Parkinson's disease. Australian government introduced a variety of regulations

human in growing tissues of plant stem and patients. Neural cells will make with Parkinson's disease. Australian government introduced a variety of regulations to cover cloning. To make Dolly they removed the nucleus from an egg and take protein from cytoplasm and generate DNA in embryonic state. For therapeutic cloning they remove nucleus from an egg and combine it with patient's cell and let it grow. They can produce required

let it grow. They can produce required kind of tissues. Embryos are donated for certain areas of research. This can cause harm human life. It was objected that

2

embryos produced of IVF should not be created and destroyed in lab's. That's why they are trying to create stem cells by adding the de-nucleated cell into an adult cell. They set a

stem cells by adding the de-nucleated cell into an adult cell. They set a prospectus that cloning should be done without using human embryos but it seems impossible. In countries there are no rules of governing cloning. This would be a shame. We need to make therapeutic cloning in safe and sensible ways.

ACTIVITY 15.1:

Read the following article. Note down as much information as much you can under two headings.

- **Advantages of GM crops.**

- ✧ GM crops are grown, cooked and eaten by US people.
- ✧ GM crops are answer to world hunger and it is "anti science".
- ✧ India decided to grow Gm crops, there would be no consumer revolt against its GM cotton from Europe.

- **Disadvantages of GM crops:**

- ✧ GM crops added personal health fears
- ✧ The debate on GM crops splitted the world on two banks.
- ✧ The key problem of the technology as the strange hold to the bio-tech industry.

ACTIVITY 15.2:

Take a large sheet of paper and, using the same article, note down the following headings, spread out over the page.

ACTIVITY 15.2:

Take a large sheet of paper and, using the same article, **note** down the following headings, spread out over the **page**.

- Health concerns:

Britain conformed as a nation of GM skeptic, and added personal health fears to what might or otherwise have seemed a list of distant environmental concerns

- The effect on third word:

The move will cut crop losses to the dreaded boll-worm and

- Health concerns:

Britain conformed as a nation of GM skeptic, and added personal health fears to what might or otherwise have seemed a list of distant environmental concerns

- The effect on third word:

The move will cut crop losses to the dreaded boll-worm and liberate farmers from the dependency of hazardous pesticides.

New crop project offer India, and perhaps other developing countries, chance to step up western bio Tech Corporation and set their own biotechnology agendas.

- The attitude of the US:

The US is likely to respond with a trade war. Two weeks ago a US department of agriculture official called the proposed rules unworkable and irresponsible.

- The debate in Britain:

- The debate in Britain:

Three years ago, ministers set up a series of farm trials to monitor the impact of GM crops on farmland biodiversity. With these nearly over, the government must decide whether to permit commercial growing. In the run up, ministers have commissioned new reports. One on science other on cost and benefits of the technology and setup a panel to organize what a government calls a "national debate".

- The future:

government calls a "national debate".

- The future:

There would be no consumer revolt against its GM cotton or demands from Europe for regulations to label any T Shirts made from it.

3

demanding that if or when GM food is grown or imported. It must be labeled and traceable. Europe has not yet had an honest debate about GM crops.

3: Finally, link the groups of ideas by drawing a line from one group to another. You could describe the nature of the link on or below the line.

Ans: Health concerns.....The effect on third world.....European reaction on GM crops..... The attitude of the US.....The debate in Britain.....The future.

Health concerns: Health fears.

Health concerns: Health fears.

Effect on third world: Own biotechnology agendas.

European reaction: Against GM crops.

US attitude: In favour of GM crops.

Britain debate: National.....gfh

Future: What happening next.

ACTIVITY 15.3:

2: Device a title for your article?

2: Device a title for your article?

Ans: Title is "Debate on GM crops".

3: Write an opening paragraph which establishes the subject of the article and makes an overall judgment?

Ans: A controversial debate splits world and may remain in continuity.

4: Now use each of your heading to form a topic sentence for a paragraph. Link one paragraph with another according to

the connections you have drawn on the mind map. You may write your paragraphs in any order you choose that is reasonable or logical?

- 1) Ans: GM furore: The three years ago.....concerns.
- 2) Splitting of world into camps: Since then we havetake it.
- 3) Effect on the quarter of the world farmer: One countryWill be crucial.
- 4) Crops in India: India is alsobiotechnology agendas.

- 4) Crops in India: India is also.....biotechnology agendas.
- 5) Controversy in US and Europe: Europe too.....the official step.
- 6) Debate in Britain: The urgent scrap.....national debate.
- 7) Confusion in the purpose: Confusion in the purposes: Ministers not unreasonablereports are confused.
- 8) Opponents and proponents of GM crops: Of course it would be.....to oppose them.
- 9) The future happening the GM crops: But it is going to.....seize the chance.

9) The future happening the GM crops: But it is going to.....seize the chance.

5: Compare your piece of writing with the original article. Does your summary present the ideas fairly?

Ans: The order of the paragraph is logical and my order of paragraph resembles with the original order sequence.

ACTIVITY 15.4:

1: Explain the use of word "unsuspecting"?

Ans: The word unsuspecting means "not aware of the presence of the nature". Dolly sheep was stunning for the world and may create a great change in the whole world.

2: Why do you think Hairs on neck still bristles when human cloning is mentioned?

Ans: Because it will stir up people's feelings that scientist are going too far in "meddling with nature" or they are cheapening the human life by using human eggs and embryos.

3: Explain why there now seems less to worry about than first

3: Explain why there now seems less to worry about than first appeared?

Ans: Because only an extreme fringe wants to use cloning to make copies of people and such uses of cloning should be banned where they are not already.

4: What is meant by "therapeutic cloning"?

Ans: "therapeutic cloning" means growing tissues for patients that are genetically identical to their own, and can be replaced with infected tissues.

5: Give the meanings of each of these expressions as it is used

with infected tissues.

5: Give the meanings of each of these expressions as it is used in the article?

Meddling with nature:

Exploring the connections between art and nature means that scientist are inferring with nature by using cloning.

a) Cheapening human life:

The process of cloning, by using the human eggs and embryos means directly dealing the value of human life.

b) Harbor.....objections:

Many religious groups are opposing the cloning technology because it depends upon human embryos.

c) An extreme fringe:

Only an extreme fringe wants to use cloning to make copies of people, and such uses should be banned where they are not already.

d) Makingheavy whether of:

The governments and regulators are making such conditions

d) Makingheavy whether of:

The governments and regulators are making such conditions (heavy weather of) human cloning

e) Widespread derision:

Making fun on a large scale.

6: What is "the latest news from the Roslin and how would it help" remove many of the ethical objections to cloning?

Ans: The latest news from Roslin is likely to perform the cloning process without destroying human eggs or embryos. They are

6. What is the latest news from the Roslin and how would it help" remove many of the ethical objections to cloning?

Ans: The latest news from Roslin is likely to perform the cloning process without destroying human eggs or embryos. They are trying to create stem cells, directly by adding the nucleus of an adult cell to de-nucleate the embryonic stem cells.

7: Explain why the writer feels that "it is time to approve therapeutic cloning"?

Ans: If the regulators do not decide soon there is a strong chance that some researchers will head for countries, where

trying to create stem cells, directly by adding the nucleus of an adult cell to de-nucleate the embryonic stem cells.

7: Explain why the writer feels that "it is time to approve therapeutic cloning"?

Ans: If the regulators do not decide soon there is a strong chance that some researchers will head for countries, where there are no rules governing cloning. This would be shameful. We should make sure that "Therapeutic cloning" will be used in a safe and sensible way.
